

REMARKS

The Examiner's comments in the Advisory Action mailed January 12, 2005 are noted with appreciation and further changes have been made in the claims to advance prosecution.

More particularly, independent claims 19, 20, and 21 have been revised to specify that the phenylene group in the Ar³ moiety is a group "with only one phenyl ring." The Examiner will note that these three claims have also been revised better to indicate substituent Y as "a substituted aryl group substituted with an electron donating substituent and containing five or more conjugated bonds."

Applicants respectfully submit that the changes in claims 19 to 21 not only better define the invention but also further distinguish over the compounds of Kawamura et al. '129, which contain two phenyl rings bonded by a linking group X; see formula (1) therein. Claims 19 to 21 now require the phenylene group to have only one phenyl ring.

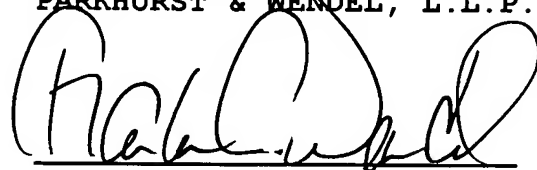

Claim 44 has been canceled.

Serial No. 10/718,554

Further consideration of the application in view of the above changes is earnestly solicited.

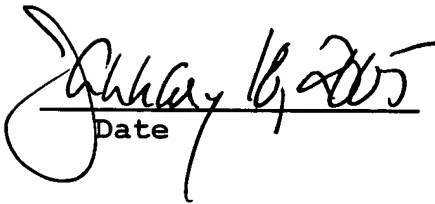

Respectfully submitted,

PARKHURST & WENDEL, L.L.P.
